

## Decentralized Options for Real-World Assets

The first protocol bringing institutional-grade options and perpetual futures on equities, commodities, FX, bonds, and ETFs. All settled on-chain.

49+ Markets

6 Asset Classes

On-Chain Settlement

0% Protocol Fees

Built on Base

## THE PROBLEM

# TradFi Options Are Broken

**5B+**

people without access to derivatives markets

### Centralized Gatekeepers

Traditional options markets require broker accounts, KYC, minimum balances, and are restricted by jurisdiction. Billions of people are excluded.

**\$8B+**

lost in exchange collapses since 2022

### Counterparty Risk

Centralized exchanges hold custody of your assets. When they fail (FTX, MF Global), traders lose everything. Settlement risk is a constant threat.

**5**

avg. assets on existing DeFi options platforms

### Limited Asset Coverage

Even DeFi options protocols only cover 2-5 crypto assets. No protocol offers options on equities, commodities, FX, or fixed income.

**\$0.65**

avg. per-contract fee on traditional exchanges

### High Fees & Opacity

TradFi charges commissions, exchange fees, clearing fees, and hidden spread markups. Order flow is sold to HFT firms. Retail traders lose.

## THE SOLUTION

# HyperDex Protocol

A cash-settled synthetic options protocol deployed on Base Chain, combining centralized matching efficiency with decentralized custody and settlement.

### Decentralized Custody

Collateral stays in audited smart contract vaults. Users maintain full self-custody. No single point of failure.

### Centralized Matching

High-performance Rust matching engine delivers sub-millisecond execution. CLOB-style orderbook driven by professional market makers.

### Real-World Assets

49+ instruments across 6 asset classes: from S&P 500 options to Gold perpetuals to EUR/USD FX options. All synthetic. All on-chain.

**Architecture Model:** Inspired by Deribit's proven model: centralized orderbook for speed, decentralized settlement for trust. European-style options with automatic exercise at expiry.

## MARKET OPPORTUNITY

# A Trillion-Dollar Market

**\$1.5Q**

Global Derivatives Notional  
Annual notional value (BIS, 2024)

**\$40B**

Crypto Options Volume  
Monthly across all exchanges

**<0.1%**

DeFi Options Share  
Massive whitespace for disruption

## Asset Class Coverage

### Equity Indices

S&P 500, Nasdaq-100, DAX 40, Nikkei 225

### Single Stocks

AAPL, NVDA, TSLA, META, GOOGL, AMZN

### Commodities

Gold, Silver, Crude Oil, Natural Gas, Coffee

### Foreign Exchange

EUR/USD, USD/JPY, GBP/USD, AUD/USD

### Fixed Income

US 10Y Treasury, 2Y Treasury, Bunds

### ETFs

SPY, QQQ, IBIT (Bitcoin ETF), GLD, TLT

**No existing DeFi protocol** offers options on equity indices, single stocks, commodities, FX, or fixed income.  
HyperDex is the **first mover** in on-chain RWA derivatives.

## THE RETAIL OPPORTUNITY

# Options Are the Biggest Market Nobody Sells to Retail

Perpetual futures exploded in retail because of one number: **100× leverage**. But options can deliver **1,000×+ returns** on far out-of-the-money calls, and almost no retail trader knows this.

**\$1.5Q**

Options Notional Volume

Largest derivatives market by volume globally. Bigger than futures, swaps, and forwards combined

**~0%**

Retail Penetration in DeFi Options

Every DeFi options protocol (Opyn, Lyra, Hegic) targets institutional/whale users. Retail is completely unserved

**1,000×+**

Potential Option Returns

A \$50 OTM call can become \$50K+. This is the narrative that will make options viral with retail, just like 100× did for perps

### No KYC = Insider Access

Polymarket proved that permissionless markets create **information edges**. Insiders and analysts trade freely because there's no KYC wall. Hyperliquid proved the same for perps. HyperDex brings this to **options**, the instrument that benefits most from information asymmetry.

An earnings leak, a macro surprise, a regulatory announcement: anyone, anywhere can express a directional or volatility view instantly through options on HyperDex, without KYC, without a broker, without geographic restrictions.

### Why Retail Hasn't Arrived Yet

Every platform that offers options today (Deribit, Coinbase, Robinhood) requires KYC, has confusing UX, and **never markets the upside**. Retail discovered perps through the "100× leverage" meme. The equivalent for options is the **"\$50 → \$50K"** narrative.

HyperDex is built to be the first platform to crack retail options adoption: no KYC, simple UX, zero fees, and a marketing engine built around showing real P&L screenshots of 100x-1,000x option trades.

**Perps went viral because of leverage.** Options will go viral because of **asymmetric payoffs**, and HyperDex is the only permissionless platform positioned to capture that retail wave.

## PRODUCT

# Two Powerful Trading Products

### OPTIONS

#### European Options

- ✓ Cash-settled, auto-exercised at expiry
- ✓ TWAP-based settlement prices via Chainlink + Pyth
- ✓ Full options chain: all strikes, weekly + monthly expiries
- ✓ 19 multi-leg strategies (spreads, straddles, condors)
- ✓ Deribit-style portfolio margin for market makers
- ✓ Complete Greeks ( $\Delta$ ,  $\Gamma$ ,  $\Theta$ ,  $V$ ) via Black-Scholes

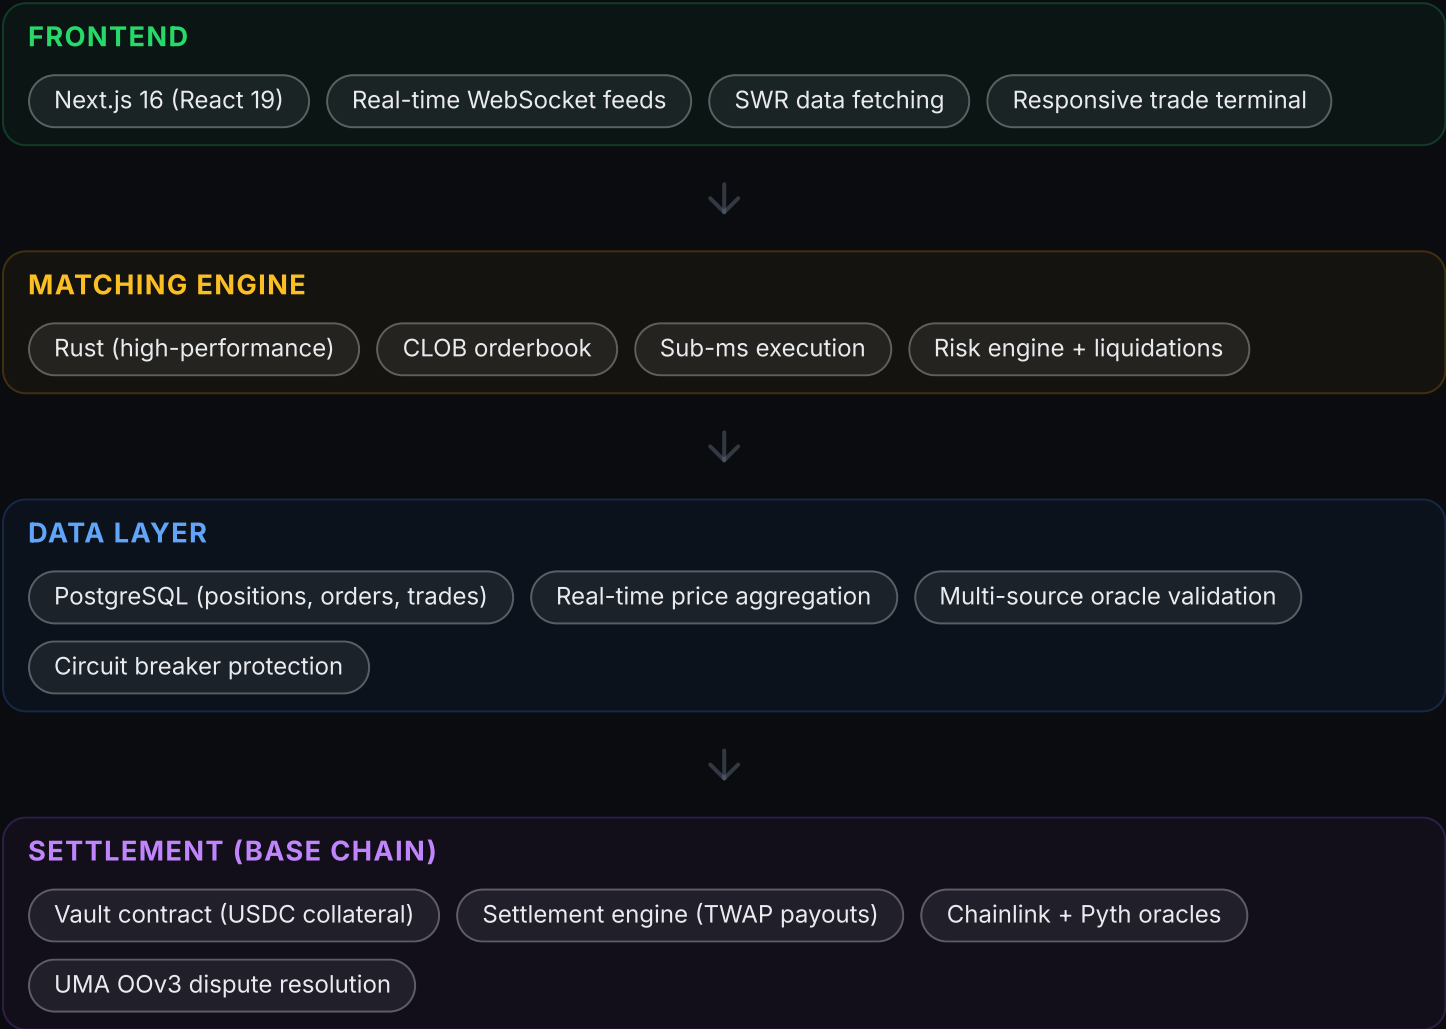

### PERPETUALS

#### Perpetual Futures

- ✓ Up to 50× leverage (varies by asset class)
- ✓ CLOB orderbook: limit, market, and IOC orders
- ✓ Funding rate mechanism for price convergence
- ✓ Real-time liquidation engine with insurance fund
- ✓ Cross-asset perps: indices, commodities, FX
- ✓ WebSocket streaming for live orderbook + trades

TECHNOLOGY

Institutional-Grade Architecture

**<1ms**

Order-to-fill latency

**Rust**

Zero-GC matching engine

**3-Layer**

Oracle validation (Chainlink + Pyth + TradFi)

Hyperliquid

Crypto perps only. No options, no RWAs. Strong CLOB but limited to crypto assets. \$16B+ daily volume.

Ostium

RWA perps only. No options, AMM-based (no orderbook), no multi-leg strategies. Raised \$3.5M seed + \$24M Series A.

Coinbase / Deribit

CeFi platforms. Crypto-only derivatives. KYC required, custodial, geo-restricted. No RWA coverage whatsoever.

Robinhood

TradFi broker. US-only, full KYC, custodial, limited to US equities. No crypto options, no global access.

HyperDex is the only protocol that combines on-chain options + perps, self-custody, zero fees, and real-world asset coverage across 6 asset classes. No KYC required, enabling anyone (including insiders) to trade freely, just like Polymarket and Hyperliquid.

## ROADMAP

# Building in Public

### PHASE 1

#### Foundation

- Rust matching engine
- Next.js trade terminal
- 47 assets across 6 classes
- Perpetual futures engine
- Testnet deployment

### PHASE 2

#### Mainnet Launch

- Base chain smart contracts
- Vault + settlement contracts
- Market maker onboarding
- Chainlink + Pyth oracles
- Mainnet beta launch

### PHASE 3

#### Scale

- Portfolio margin for MMs
- Multi-leg strategies
- Mobile trading app
- Institutional API
- Cross-margin accounts

### PHASE 4

#### Expansion

- Additional L2 deployments
- Governance token launch
- Insurance fund growth
- 200+ new assets
- Exotic options (barriers, digitals)

TRACTION

## Built & Shipping

Rust

Engine Complete

Options + Perps matching engine

## What's Already Built

- ✓ Full-stack trade terminal (Next.js + Rust backend)
- ✓ CLOB matching engine with limit/market/IOC orders
- ✓ Perpetual futures engine with liquidation system
- ✓ Real-time WebSocket orderbook + trade streaming
- ✓ 47 assets with live price feeds (Yahoo Finance → TradFi API migration)
- ✓ Options chain with 21 strikes × weekly/monthly expiries
- ✓ 19 multi-leg strategy definitions
- ✓ Portfolio tracking with P&L, margin, and position management
- ✓ Solidity smart contracts (Vault, Settlement, Position Registry)
- ✓ Docker deployment pipeline (Railway)

# Let's Build the Future of **On-Chain Derivatives**

HyperDex is bringing the \$1.5 quadrillion derivatives market on-chain,  
starting with the asset classes no one else has touched.
