

Blockchain Engineer

Defiance Capital is seeking a **Blockchain Engineer** to join the development of advanced DeFi and GameFi on-chain solutions.

You will play a instrumental role in designing a cross-chain protocol that enables in-game assets to be used as collateral for loans and yield generation across multiple gaming ecosystems, regardless of their originating blockchain. Your contributions will directly shape more secure, efficient, and transparent Web3 economies.

Location	Remote / Singapore
Employment Type	Full-time / Part-time / Contract
Experience Required	2+ years
Salary Range	116,000 - 165,000 + 0.1% - 0.2% token allocation

Responsibilities

- Architect, implement, and deploy secure, gas-optimized smart contracts for cross-chain collateralization and lending of in-game assets.
- Build and maintain interoperability solutions enabling assets from various blockchains to interact within a unified GameFi liquidity layer.
- Integrate with existing DeFi protocols and design custom lending/borrowing mechanisms tailored to gaming asset volatility and liquidity profiles.

- Drive architecture decisions, technology stack evaluations, and technical roadmaps.
- Collaborate closely with frontend and backend teams for full-stack Web3 integration (Ethers.js, Web3.js).
- Proactively identify new yield generation strategies and risk management models for in-game asset lending.

Requirements

Essential

- **2+ years** of hands-on experience in Solidity smart contract development (EVM compatible).
- Deep understanding of DeFi primitives (lending pools, collateralization, liquidation, interest rate models).
- Proficiency with **Foundry**, **Hardhat**, or **Truffle** for testing and deployment.
- Strong knowledge of gas optimization techniques and contract upgrade patterns (UUPS, transparent proxies).
- Familiarity with **Web3.js**, **Ethers.js**, and integration with frontend apps.
- Experience with **Git** and collaborative workflows (CI/CD, code reviews).
- Solid understanding of common blockchain vulnerabilities.

Preferred (Nice-to-Have)

- Experience with cross-chain protocols.
- Prior work on **GameFi**, NFT collateralization, or asset bridging.
- Knowledge of non-EVM chains (Solana, Aptos, Sui) and their smart contract languages (Rust, Move).
- Contributions to open-source blockchain projects.
- Familiarity with subgraph development (The Graph) for data indexing.

What We Offer

- **Fully remote** work arrangement with flexible hours.
- **Competitive compensation** package including salary and token allocation (0.1% – 0.2%).

- **Learning & development budget** - \$2,000/year for courses, certifications, and resources.
- **Latest equipment** MacBook Pro + accessories + home office stipend.
- **Generous PTO** - 25 + vacation days + local public holidays.

How to Apply

Please share:

- Resume or LinkedIn (required)
- GitHub profile (required)
- Examples of smart contracts or blockchain projects
